EMERGING METHODS FOR EARLY DETECTION OF FOREST FIRE

PROBLEM STATEMENT

This problem statement aims to detect the presence of Forest Fire at an early stage .This project is indented to design a forest fire prediction mechanism. Forest fire prediction scheme based on image processing ,Deep learning has been proposed for the prediction in the timely manner .The proposed project is helpful to identify the fire signals and inform the respective person as an alert to take an appropriate action to prevent the forest fire and save the many trees and animals.

```
[ User ] → ( Needs a way to ) → [ Detect forest fire ] → ( So that ) → [ They can prevent the losses ]
```

Who does the forest fire affects ?	Wild animals and trees
Why is it important to use ?	To save life
What are the benefits ?	Early detection
How is it better than the others ?	Accessible by everyone at anytime
When to use ?	Anywhere at anytime
